

APPLICATION PACKAGING

Efficient handling of major application packaging roll-outs for a stable end user environment.

Verismic's Application Packaging Service helps organizations simplify the packaging process; whether they need a few or a few hundred packages. Our team eliminates the need for specialized skills and tools while reducing costs. We guarantee conflict-free software packages from a service team built on exceptional quality at a competitive price.

EXPERT TEAM

Leverage our experience without needing an internal team

DRIVE EFFICIENCY

Reduce time and costs spent on application readiness

FULL SUPPORT

Our team offers support for all common packaging types

SOFTWARE RECEIVED

All original source software is downloaded, catalogued and then transferred to our application packaging lab.

PACKAGING PROCESS

The software is packaged into your requested format using best practices, incorporating your corporate standards and conflict tested.

QUALITY ASSURANCE

Documentation is created for each package detailing the installation instructions and any information requested.

SOFTWARE TESTING

Original source software is installed manually to test for integrity and define the package dependencies or licenses required.

PACKAGE TESTING

The package is tested by our dedicated testing team, installing the package both manually and through a number of systems.

PACKAGE RELEASE

The application package and the documentation are then released through our high speed storage by email.
